“After ten years of agonizing, diapers, and two ineffective drugs, our son finally has the confidence for a sleepover, thanks to the Potty Pager.”

Daniel E. Turnbull

It’s wireless. It’s private. It inspires letters like this. And now it’s CLINICALLY PROVEN EFFECTIVE.

In a two year clinical study at the University of Alabama medical school, the Potty Pager has been proven 71% effective on hard-to-reach TEEN bedwetters. (Lo, Perez, Hanchrow and Joseph)

So why just “control” bedwetting with drugs when you can CURE it! With the WIRELESS alarm that wakes the BEDWETTER... not the whole house!

The Potty Pager teaches bedwetters to respond normally to bladder fullness. It uses a tactile alarm, much like a silent business pager. It is 100% safe, and costs just $51.00 + S&H. It comes with a 30 day no-questions guarantee.

For complete information call: 800-497-6573 or 303-440-8517

Or visit our web site: www.pottypager.com

IDEAS FOR LIVING, INC. BOULDER, COLORADO 80304

because life’s challenging enough without a bedwetting problem!

effective therapy
(no spoonful of sugar necessary)

5 once-daily doses
(efficacy that’s easy for your little patients to take)

COVERAGE OF KEY RESPIRATORY PATHOGENS

**TYPICAL**
- Streptococcus pneumoniae
- Haemophilus influenzae
- Moraxella catarrhalis

**ATYPICAL**
- Chlamydia pneumoniae
- Mycoplasma pneumoniae

- BETTER COMPLIANCE MAY IMPROVE PATIENT OUTCOMES
- COSTS LESS THAN MOST BRAND-NAME ANTIBIOTICS
- PROVEN TOLERABILITY

In acute otitis media, the most common side effects are diarrhea/loose stools (2%), abdominal pain (2%), vomiting (1%), and nausea (1%). In community-acquired pneumonia, the most common side effects are diarrhea/loose stools (5.8%), abdominal pain, vomiting, and nausea (1.9% each), and rash (1.6%).

Zithromax® (azithromycin for oral suspension) is contraindicated in patients with known hypersensitivity to azithromycin, erythromycin, or any macrolide antibiotic.

Zithromax is indicated for pediatric infections such as acute otitis media due to H influenzae, M catarrhalis, or S pneumoniae, and community-acquired pneumonia due to C pneumoniae, H influenzae, M pneumoniae, or S pneumoniae.

Oral azithromycin should not be used in pediatric patients with pneumonia who are judged to be inappropriate for oral therapy because of moderate to severe illness or risk factors such as any of the following: patients with cystic fibrosis, patients with nosocomially acquired infections, patients with known or suspected bacteremia, patients requiring hospitalization, or patients with significant underlying health problems that may compromise their ability to respond to their illness (including immunodeficiency or functional asplenia).

Please see brief summary of prescribing information on adjacent page.
