After ten years of agonizing, diapers, and two ineffective drugs, our son finally has the confidence for a sleepover, thanks to the Potty Pager.

Daniel E. Turnbull

It’s wireless. It’s private. It inspires letters like this. And now it’s CLINICALLY PROVEN EFFECTIVE.

In a two year clinical study at the University of Alabama medical school, the Potty Pager has been proven 71% effective on hard-to-reach TEEN bedwetters. (Lo, Perez, Hanchrow and Joseph)

So why just “control” bedwetting with drugs when you can CURE it! With the WIRELESS alarm that wakes the BEDWETTER... not the whole house!

The Potty Pager teaches bedwetters to respond normally to bladder fullness. It uses a tactile alarm, much like a silent business pager. It is 100% safe, and costs just $51.00 + S&H. It comes with a 30 day no-questions guarantee.

For complete information call: 800-497-6573 or 303-440-8517
Or visit our web site: www.pottypager.com

IDEAS FOR LIVING, INC. BOULDER, COLORADO 80304
Man's mind, once stretched by a new idea, never regains its original dimension.

~ Oliver Wendell Holmes ~

Our minds have been stretched by the World Wide Web.

If you are a pediatrician on maternity leave, retired, or looking for a way to work from home, consider a rewarding opportunity with drpaula.com the premier website for pediatric and parenting advice. Our success has been overwhelming. However, it's becoming more difficult to handle the increasing volume of questions coming in. If you enjoy giving advice, join our team and help make a difference in the lives of parents and their kids.

CLASSIFIED ADVERTISING POLICY
When you need to contact pediatricians, contact AAP News. Each month more than 33,000 pediatricians, pediatric specialists, and other pediatric practitioners turn to AAP News for child health information they cannot get elsewhere. With a classified ad, you can speak directly to these readers.

Although the Academy follows these classified ads are from the American Academy of Pediatrics and a service is to be responsible, the Academy does not investigate the offers made and assumes no responsibility concerning them. Occasionally, it becomes necessary to modify the wording of classified ads. These changes are generally made to comply with the regulations of various federal and state commissions against discrimination or because they might be interpreted as being unfair or in conflict with accepted professional standards of medical practice.

These advertising modifications are made to maintain a classified section that is professionally responsible, ethical, scientifically and free of discrimination.

Publication of an advertisement in AAP News neither constitutes nor implies a guarantee or endorsement by AAP News or the American Academy of Pediatrics. When advertising in the classifieds of the AAP News, you agree that you will not contact any individual or practice directly, unless the advertisement from which you received contact was accompanied by an AAP News classified ad.

If you have questions about the classifieds, contact Tauber Group, (410) 242-0711 or (410) 242-8711.

In acute otitis media, the most common side effects are diarrhea/loose stools (2%), abdominal pain (2%), vomiting (1%), and nausea (1%). In community-acquired pneumonia, the most common side effects are diarrhea/loose stools (5.8%), abdominal pain, vomiting, and nausea (1.9% each), and rash (1.6%).

Zithromax® (azithromycin for oral suspension) is contraindicated in patients with known hypersensitivity to azithromycin, erythromycin, or any macrolide antibiotic.

Zithromax is indicated for pediatric infections such as acute otitis media due to H influenzae, M catarrhalis, or S pneumoniae, and community-acquired pneumonia due to C pneumoniae, H influenzae, M pneumoniae, or S pneumoniae.

Oral azithromycin should not be used in pediatric patients with pneumonia who are judged to be inappropriate for oral therapy because of moderate to severe illness or risk factors such as any of the following: patients with cystic fibrosis, patients with nosocomially acquired infections, patients with known or suspected bacteremia, patients requiring hospitalization, or patients with significant underlying health problems that may compromise their ability to respond to their illness (including immunodeficiency or functional asplenia).
