When Making Your Next Soy Formula Specification:

1. Consider enzyme activity.
Glucosylase and maltase are more active than the more fragile brush border enzymes sucrase and lactase in infants with gastrointestinal illness (Grade I villus atrophy).

2. Choose the most compatible carbohydrate source.
Glucose polymers is the most compatible carbohydrate for infants with gastrointestinal illness and common feeding problems because it is digested by glucosylase and maltase — the enzymes most resistant to mucosal injury.

3. Specify ProSobee.
The carbohydrate in ProSobee is 100% glucose polymers — the most compatible carbohydrate because it avoids reliance on the more fragile brush border enzymes.

*As corn syrup solids.

ProSobee®
with 100% glucose polymers — the most compatible carbohydrate for common feeding problems

AAP News/September 1987
Dear Doctor:
The Committee on Drugs of the American Academy of Pediatrics prepared this Patient Medication Instruction Sheet as one of several we hope you find useful to give to a parent when you are writing a prescription for this drug.

Patient Medication Instructions Sheets are now available for: theophylline, amoxicillin, diphenhydramine, phenobarbital and codeine. Each of the patient medication instructions is conveniently provided in individual pads of 50 each for $4.00 per pad. Or you can order a set of all five of the patient medication instructions for $15.00.

Ordered by: Please print or type

Please tell us what other drugs you'd like to have Patient Medication Sheets for:

---

**THEOPHYLLINE**

**Doctor:**

(Patient Name)

(Date)

Theophylline is the generic name of the drug. The brand name of the drug is...

**Why this drug is given**

This medication is used in asthma and other conditions to relieve wheezing, shortness of breath and troubled breathing.

**How to take**

Use this medication exactly as prescribed by your physician. It must be taken regularly to be most effective. Take only the amount prescribed, do not take more. If you feel it is necessary to take more (or less) contact your physician.

**How long**

Always keep an adequate supply on hand. Ask your pharmacist or physician about refills. Take this medication for as long as prescribed. If you think the medicine should be stopped before it is used up then consult your physician.

**If you forget**

If a dose is forgotten, take it as soon as remembered. If it is near or past time for the next dose, take only the scheduled dose. Never take a double dose to make up for a missed one. Take any remaining doses for the day at their regularly scheduled times.

**Common side effects**

Upset stomach, nervousness, or restlessness may occur initially. These problems often disappear with continued use. Vomiting and other less common side effects may occur. If there are any problems that may be related to the drug, contact your physician or pharmacist.

---

**Storage**

Always keep this and other medications safely stored and out of the reach of small children. Keep the medication in the container in which it came.

**Further instructions**

Do NOT take other medications without the advice of your physician.

The amount of medication you are to take is...

The medication should be taken at the following times...

The medication should be taken for ____ days.

**Additional instructions:**
