ATTENTION DISORDERS
with or without Hyperactivity

described by Adler (B.B.), Ed.D., RN, Spiegler, Ph.D.

Accurate diagnosis of ADHD is often difficult because approximately 80% of ADHD children behave well in the doctor's office. For this reason, physicians rely heavily on feedback from classroom teachers in diagnosing, medicating, and monitoring children with attention disorders.

The ASTORS' standardized behavior rating form for grades K-8 that objectively measures four specific characteristics: Attention, Hyperactivity, Social Skills, and Oppositional Behavior. The reliability, validity, and utility of ASTORS have been repeatedly demonstrated in published studies and clinical trials throughout its 30-year research history. The ASTORS also forms the basis for the 24-item version and describes classroom behavior. These ratings are summed and transferred to the Profile form of which norm comparisons are read directly.

American Academy of Pediatrics

Advanced Pediatric Life Support (APLS) Course

October 26–28, 1991
New Orleans, Louisiana

Register today for the Advanced Pediatric Life Support (APLS) Course to be held during the American Academy of Pediatrics Annual Meeting in New Orleans.

The APLS Course provides a detailed study of the early management of pediatric medical and surgical emergencies. Nationally renowned faculty will teach assessment and management techniques necessary in the care of critically ill or injured infants and children. Major life support procedures are practiced hands-on. Enrollment is limited to 100. Registrations will be processed on a first-come, first-admitted basis.
